

Email and Internet

An internet provider
an update
an attachment
a hacker
to go online
to browse
to open and close a file
to attach a document

a network
a download
a backup copy
a computer geek
to be offline
to download
to key something in
to hack

a browser
a chat room
piracy
to log on
to log off
to update
to email

And now a dialogue

Man: Could you send me an email with your parent's address?

Woman: Don't forget to attach your file.

Man: Don't download software on the site that is not secured.

Woman: I can't log on.
