Medical progress

W: Hello everybody. Today I would like to touch upon a topic quite actual and interesting, which is medical progress. Can somebody tell us about it?

Sarah: Yes. Thanks to medical progress, life expectancy has increased dramatically. Not only has medical progress lengthened life, but also it has deepened its quality.

W: Very good Sarah. And could you give us practical examples?

Sarah: of course. With robots trauma to tissue is drastically reduced, cutting post-operative pain and slashing recovery time. As a matter of facts, capable of very fine movements, robots can work in spaces too small for a surgeon's hands.

W: Yes Sarah, microsurgery and laser surgery are a major advance in modern medicine. Good to be known also is that medical progress has contributed substantially to the dramatic fall in infant mortality. What about DNA?

Sarah: I've heard that amazing new medicines based on DNA will revolutionise our lives? And recent discovery that probe, analyse and manipulate genes now pave the way for a second century of unprecedented medical progress.

W: Exactly. We have the proof here that progress is unstoppable.

GLOSSARY:

Medical progress	Spaces
To touch upon	A surgeon
To increase	Microsurgery
To lengthen	Laser surgery
To deepen	A major advance
To reduce	Modern medicine
To cut	Dramatic fall
To slash	Infant mortality
To contribute	DNA
To be based on	Medicines
To revolutionise	Discovery
To probe	Genes
Analyse	A second century
To manipulate	The proof
To pave the way	Actual
A topic	Thanks to
Life expectancy	Dramatically
Life/lives	Drastically
Quality	Capable
Practical examples	Good to be known
Trauma	Substantially
Tissues	Amazing
Post-operative pain	Unprecedented
Recovery time	Unstoppable
Very fine movements
